theorem 0.1.   *(d) qq*

   (iii) qq

theorem 0.2.

It works properly now:

Example 1. 0.1, 0.1 (d), 0.1 (d.iii), 0.2
             theorems 0.1, 0.1 (d), 0.1 (d.iii) and 0.2

Example 2. (d), (d.iii)
             theorems (d) and (d.iii)

Without hack it works like this: (it is unsorted)

theorem 0.3.   *(d) qq*

   (iii) qq

theorem 0.4.

Example 1. 0.3, 0.3 (d), 0.3 (d.iii), 0.4
             theorems 0.3, 0.4, 0.3 (d.iii) and 0.3 (d)

Example 2. (d), (d.iii)
             theorems (d.iii) and (d)
